

#### ABSTRACT OF THE DISCLOSURE

A CATV tuner includes a tuner box including an input circuit, a first mixer circuit, a first oscillation circuit, a first IF circuit, a second mixer circuit, a second oscillation circuit, and a second IF circuit. The input circuit has an input terminal, an upstream-signal input terminal, and a bandpass filter provided therebetween. The input terminal is connected to a distributor via a high-pass filter. An output from one output end of the distributor is subjected to processing such as filtering, amplifying, and so forth, and transmitted to the first mixer circuit. The other output end of the distributor is connected to a downstream-signal output terminal via a low-pass filter and an amplifier.
